Pioneer Project (NDA)

2024 – Now @ Ubisoft Massive: Early Development

C++, Character, Camera and Vehicle

Starting at the concept phase, I worked on all character, camera and controls code for the project, in a team of around 65 people.

I developed several features, with the highlights being implementing a full character movement system with animation support, designing and implementing a streamlined status effect system based on my previous experience. I had a more senior role in this project, and was expected to spearhead several topics.

System Ownership:

- All Character Movement code
- Creating a Vehicle implementation
- Equipment & Weapons
- Player Animation code
- Creating a Status Effects System
- Building system

Technical Expertise and Responsibilities:

- Technical system architecture
- Multithreading
- Networking and Replication
- Prototyping and Brainstorming

Avatar: Frontiers of Pandora

2021 – 2024 @ Ubisoft Massive: Launch, Post-Launch, DLC

C++ Gameplay Programmer

A large AAA development project going into full production as I joined, starting as a Junior and going through the intermediate phase of my career. I learned to take ownership of several systems, and had a critical role in the release process of the game, as well as supporting the post-launch DLCs.

System Ownership:

- Player Skills
- Status Effects
- Character Loading
- Visual Customization
- Character Creation

Areas of Expertise and Responsibilities:

- Character Optimization
- Threaded Loading
- Networking & Replication
- Serialization of Gameplay Data
- Revocation Systems
- PS5 / Xbox Development

The Division 2: Warlords of New York

2020 @ Ubisoft Massive: Launch

C++ Gameplay Programmer Intern

We started on this DLC where I took responsibility for my first gameplay system. This meant implementing new functionality needed for the DLC, as well as making systemic improvements.

System Ownership:

- Status Effects

Areas of Expertise and Responsibilities:

- Gameplay Abilities (Skills)
- Refactoring existing implementations
- Continuing previous responsibilities

The Division 2

2019 @ Ubisoft Massive: Post-Launch

C++ Gameplay Programmer Intern

First AAA project of my career, starting as an intern I was mentored by our gameplay networking and replication expert and our Character, Camera and Controls lead for the project. I worked on fixing problems in a game in a live environment, which was a large responsibility as an intern.

Technical Expertise and Responsibilities:

- Networking and Replication
- Movement System Improvements
- Shooting Mechanics
- Bugfixing on a Live Game

Bachelor's Degree in International Game Architecture and Design, (cum laude)

2016 – 2020 @ Breda University of Applied Sciences, Netherlands

The University focussed on simulating AAA development, and was heavily project based with a focus on teamwork and feedback. Following the C++ Programming track, I helped create the C++ Expert group with weekly meetings, graduating Cum Laude with a Grade Average of 8.5.

Focus Topics:

- Game Architecture
- Modern C++
- Math and Algorithms
- AI and Data Structures
- Teamwork & Feedback
- Project Management
